SUMMARY

Frontend Engineer with 4+ years of experience building scalable, high-performance web applications using React, TypeScript, Next.js, and modern UI tooling. Proven track record delivering production-ready features for fintech, e-commerce, and SaaS platforms. Expert in responsive design, design systems, performance optimization, and cross-functional collaboration to create exceptional user experiences.

WORK EXPERIENCE

Frontend Engineer - Mainstack

June, 2023 – March, 2026

- Developed discount management system using React and TypeScript, enabling merchants to configure dynamic pricing models.
- Built contact card feature with Google Contacts integration for seamless customer data exchange.
- Implemented multi-channel payout system supporting PayPal, Payoneer, Mobile Money, bank transfers across multiple currencies (USD, GBP, NGN, GHS).
- Engineered customizable automated email system with real-time preview using modern frontend architecture.
- Created dynamic blog platform with Strapi CMS for flexible content management.
- Refactored legacy codebase into modular, component-driven architecture, improving maintainability and performance.
- Developed robust form systems with validation, enhancing user experience and reducing errors.
- Contributed to scalable design system with reusable components, icons, and tokens.
- Optimized 6+ responsive web applications for performance, SEO, and accessibility.
- Integrated GSAP animations to improve user engagement.

Junior Frontend Engineer - Skyt Technologies

September, 2022 - May 2023

- Built reusable UI components in React, accelerating development and ensuring consistency.
 - Developed logistics web application connecting transporters and clients using responsive design principles.
 - Integrated third-party REST APIs for real-time data flow.
 - Collaborated with designers and backend teams to deliver optimized, user-centric interfaces.
-
